July 3<sup>rd</sup>, 2018

### **GreenBrilliance USA announces manufacturing in the United States**

*Manufacturing of high-efficiency Solar Photovoltaic panels expected to create jobs in America.*

GreenBrilliance USA, a leading turnkey solar solution provider in the Mid-Atlantic region, has announced plans for manufacturing high-end photovoltaic solar panels in the United States.

GreenBrilliance USA, said on Tuesday that, by locally manufacturing high-efficiency crystalline and Bi-facial PV panels in the country, it will create hundreds of news jobs in a sector that is seen as critical to the economy. Renewable energy has become the center stage of the American economy with the steady growth of Solar in the utility and distributed markets within the United States and its time to bring manufacturing back to America.

“This 4<sup>th</sup> of July, is a great time to announce our new Made-in-USA solar panels manufacturing” said Sumit Bhatnagar, President & CEO of GreenBrilliance USA. “We will be locally manufacturing our high-performance and high quality PV modules. We hope to combine the internally developed state-of-the-art technology with the creativity and hard work of American workers to continue to deliver world-class products to our customers. By manufacturing the panels in the USA, we intend to serve hundreds of installers and project developers nationwide, eagerly looking for better options in PV panels for their projects and customers. Dearth and lack of availability of “Made in USA” solar panels today has left a big void in the market space.”

Bhatnagar, stated that the “Made-in-USA solar panels will not only be high performance and quality but be more competitive than any foreign product in the market. We intend to build relationships and work directly with installers nationwide by offering them not just a Solar Panel but a great experience”. He added that “The Company will be announcing details on the new manufacturing facility shortly”.

#### **About GreenBrilliance USA:**

GreenBrilliance USA is a vertically integrated, end-to-end solar energy company based in mid-Atlantic USA. A manufacturer and a leading provider of turnkey EPC solutions for residential, commercial, and utility scale (MW size) power plants worldwide.
